

# SPOTLESS STAINLESS

REMOVES RUST AND SURFACE IRON THAT CAUSES RUST FROM STAINLESS STEEL AND FIBERGLASS.

**Brush ON**  
**Rinse OFF**

**Spotless Stainless** is the simplest and most effective way to remove rust and the “surface iron” that causes rust from Stainless Steel...

**Spotless Stainless is not a polish.**

Applying Spotless Stainless takes less time, less effort, less cost and no mess compared to methods that require rubbing, scrubbing or polishing. You brush it on - Great to reach rust and protect stainless in tight places adheres to vertical surfaces.

## What Our Customers are saying!

*We tested Spotless Stainless today. I poured some into a small cup and with a brush coated a rusty shackle. Within less than 30 minutes it looked like new!! My wife was so impressed she then treated the satin (brushed) finished galley sink. She called me to come see it stating "IT LOOKS BRAND NEW"!! Needless to say we are very impressed, as are our friends, and will order more before our departure for the Bahamas. GREAT PRODUCT!!!*

*I have been searching for a way to clean up our 25 year old stainless. I have found it! I have tried all kinds of stainless cleaners and polishes. To my TOTAL amazement Spotless Stainless works just like it says it does. Our stainless looked bad... lots of stains and rust, now it looks amazing. The stainless looks better than the places that I had spent hours with polishes and cleaners. I am thrilled about your product. It is the best stainless cleaner I have seen in 40 years of being around boats and saltwater.*
