

PROP-DEFENDER PROPELLER FOULING PROTECTION

Two Stage Advanced Coating

Stage 1 – Energy Absorbing Adhesive

Stage 2 – ‘Super Slippery’ Hydrophobic Coating

Prop Defender is the latest propeller and running gear protective coating, designed to repel marine fouling from underwater metal surfaces. The comprehensive kit is probably the best and most effective long lasting coating system available.

- Gives props a long lasting and ultra smooth surface, which increases boat speed.
- Keeps props and running gear free of fouling, which makes them more efficient and decreases fuel consumption.
- Completely free of Toxins, Solvents, VOC's and Biocides, safe to use with zero effect on the marine environment.
- Reduces corrosion and lowers maintenance costs.
- Offers 12-24 months protection from fouling.
- The finished coat has a clear gleaming appearance and gives lasting protection.

Where can I get Prop Defender?

The kit can be posted by normal mail as it is free of solvents, toxic chemicals, hazardous ingredients or biocides. This means Prop Defender can be purchased from www.prop-defender.com for next day delivery (UK Mainland) or from your local distributor.

How easy is it to apply?

Can be applied easily by the boat owner or professional applicator. There are no complex primers and no tight timescales for over-coating. The application instructions are straight forward to follow, thoroughly tested and by following the detailed advice, users will achieve perfect protective coating.

How long will it last?

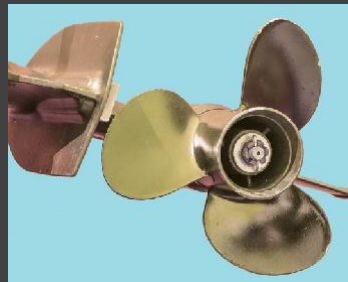

Prop Defender is effective and durable and should last a minimum of one whole season, probably more. The coating does not wear out. Its only enemy is damage or abrasion. Prop Defender is unaffected and will not lose any of its properties if kept out of the water.

Is it expensive?

Due to its advanced technology, it is probably the most economical system on the market. It will save fuel, improve efficiency and usually pays for itself in a matter of months.

What can I use it on?

Propellers, rudders, trim tabs, shafts, jet drives, bow and stern thrusters. Can be used on bronze, stainless steel, nibral and aluminium surfaces.

TREATED

UNTREATED

The 200ml kit will treat nearly 1m² / 10.75 ft² of propeller and stern gear surfaces.
